## **DETAILED ACTION**

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6 and 28-31, drawn to a system and method for distinguishing an auditory alert signal from a background of one or more other auditory signals, classified in class 381, subclass 98.
- II. Claims 6-14 and 32-40, drawn to a system and method for distinguishing an auditory alert signal from a background of one or more other auditory signals, classified in class 381, subclass 17.
- III. Claims 15 and 41, drawn to a system and method of distinguishing an auditory alert signal, classified in class 381, subclass 56.

The inventions are distinct, each from the other because of the following reasons:

Inventions III and (I or II) are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination (group III) as claimed does not require the particulars of the subcombination as claimed because the combination has a function of balancing the sounds heard at the ears of an user, such as in a stereo system while providing another sound in the user's head, such as background noise which is useful for noise cancellation. The subcombination (either groups I or II) has separate utility such as improving the user's awareness

Page 3

of an information signal through signal processing manipulation which is useful in computer applications, audio signals in cinema, etc. The specific signal processing (which is recited in the dependent claims of group III) of the additional sound signal in group III is not essential to determination of the claim's patentability and acts as evidence that the combination does not rely upon the specifics of the subcombination for its patentability.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as localizing a sound source which can be used in visual applications such as computer game environments or movies. For example, the method of invention II can be used to synchronize the apparent location of a sound source with the movement of a visual character across a screen. Invention I cannot be used for the same purpose. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian T. Pendleton whose telephone number is (703) 305-9509. The examiner can normally be reached on M-F 7-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tran Sinh can be reached on (703) 305-4040. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
